Sterile Surgical Scrub Brush Description

Sterile Scrub Brushes consist of a polyethylene brush and sponge. In line with customer requests, a nail pick made of polystyrene can be added to the packaging, which is used to clean in and around the nail.

Indications

Sterile Scrub Brushes are used for cleaning and disinfecting forearms, hands and nails before and after surgical intervention, dressing and examination.

Physical Characteristics

Sterile Scrub Brushes consist of a plastic brush on one side and a sponge on the other. It is produced according to the following dimensions: 8 cm (Length) x 5 cm (Width) x 4 cm (Height). The brush is made of low density polyethylene. The sponge is 22±2 kg/ m3 dense and is polyurethane based. The sponge and brush are glued together via a hotmelt adhesive.

Indications

Sterile Scrub Brushes are used for cleaning and disinfecting forearms, hands and nails before and after surgical intervention, dressing and examination.

Use of the Device

A. Hands should be kept higher than the elbow during the whole process.
B. Hands and arms are wetted with water up to the elbow.
C. The brush is carefully removed from its sterile packaging.
D. Approximately 3 ml of disinfectant is applied to the wetted area by hand or with the sponge of the brush.
E. The area where disinfectant is applied is rubbed with the brush for at least 1 minute.
F. Making sure to clean between the fingers and under the nails the brush.
G. The washed area is rinsed with water.
H. Steps D, E, F and G are repeated and a second wash is made.
I. The washed area is dried with a disposable surgical towel. A separate towel is used for each hand/arm.
J. Hands are kept above the elbows until a surgical gown is put on.
